

Contact App

This is the contact app i have developed for a course assignment, I have used fragments, recyclerview and sqlite database to do this in the android studio.

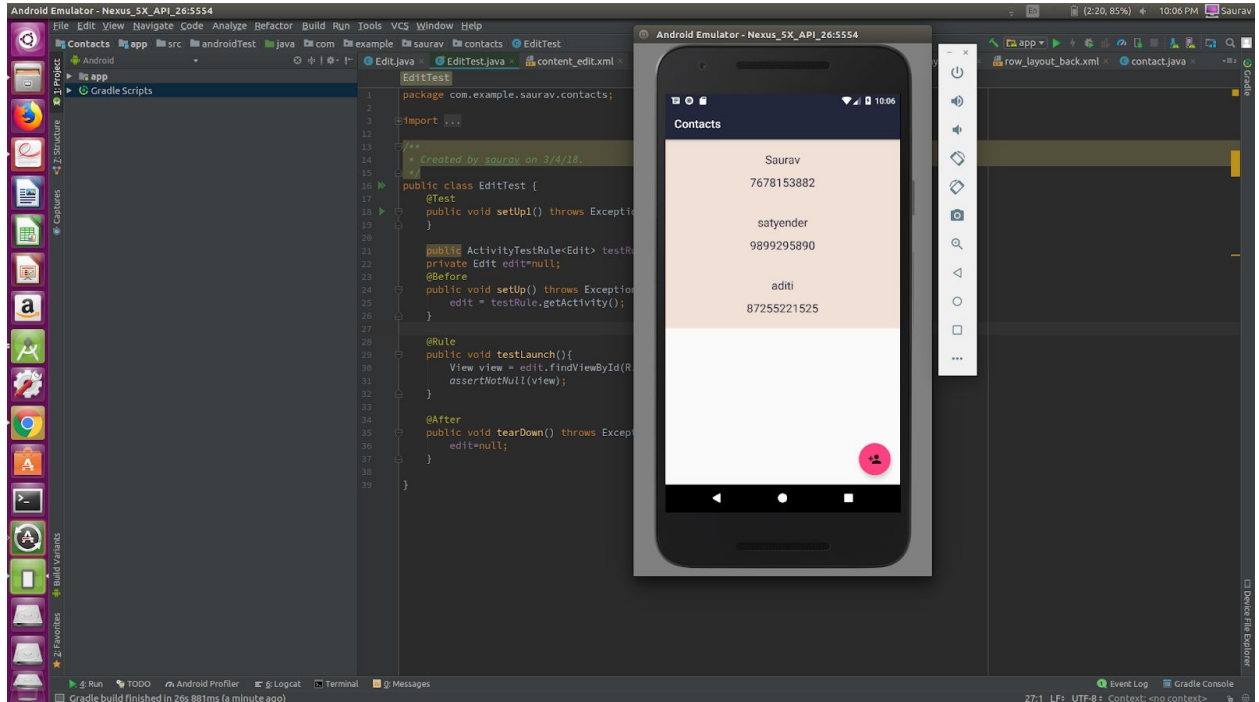

Functionalities:

1. You can add contact.
2. You can edit existing contact.
3. You can make call or send email.
4. It can also work on the tablet.

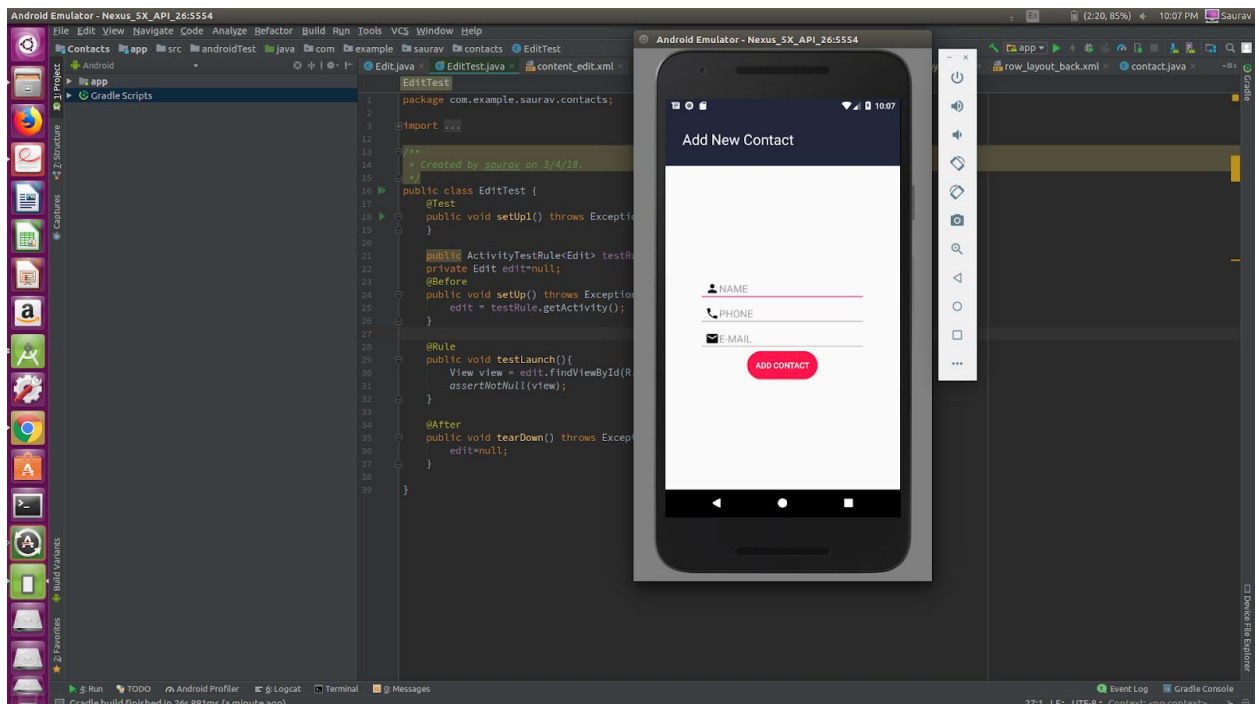

The Sqlite database has three fields, Name, email, Number of the user, The relevant screenshot are as follws, I also did the testing using the Junit testing.

Relevant screenshot for the phone are as follows:

1. Contact List

2. Add screen

3. Profile screen

4. Edit screen

5. Tablet screen
